documents which have been recorded. The chants and native poetry published by Thomson were transcribed and translated by Salmon, who also obtained the long list of kings which is given in the same paper.

During 1914-1915 Mrs. Routledge spent 16 months on the island and thoroughly studied its archaeology and ethnology. Unfortunately only the popular account (194) of this expedition and a monograph on Orongo (195) have been published. Routledge's survey seems to have been very detailed, and it is regrettable that her findings have not been made available.

Although France had certain rights on the island, she formally renounced them, and in 1888 the Chilean captain, Policarpo Toro, annexed the island for Chile. An unsuccessful attempt at colonization was made by Pedro Toro Hurtado, who took a group of Chileans to the island. Mr. H. Merlet of Valparaiso acquired from the representatives of Brander, Dutroux-Bornier, and Salmon the interests they held on Easter Island. The Chilean government leased the whole island with the exception of the village of Hanga-roa and the near-by lands which remained the property of the natives. The interests purchased by Merlet were sold to the Compania Explotadora de la Isla de Pascua (Williamson and Balfour Co.) who still own the land.

Every year the Chilean training ship *Baquedano* goes to Easter Island. The commander of the ship has a supervisory authority and settles all the conflicts which have arisen during the year. Unfortunately the *Baquedano* stops at the island for only a few days, and the various problems of the natives can receive but superficial treatment. The training ship carries to the island old clothes given by Chilean families. These are distributed among the natives, very often in exchange for curios.

The Williamson and Balfour Co. is the only real link the natives have with western civilization. It gives them work and the opportunity to buy the European articles and food they need. Of the 61 square miles, 7.72 square miles belong to the natives; the rest belongs to the company. At present the natives have more land than they need and cultivate only a part of it. When a young couple marries, the government gives them 10 hectares. Perhaps in the distant future, if the population continues to increase at the present rate, the islanders will need more land. With the exception of employees of the company, the natives are not allowed to cross the boundaries of the strip of land which is reserved for them. This measure, which may seem drastic, has been taken to prevent sheep stealing, which is carried on by natives as a kind of sport. Despite barbed wire, no week passes in which they fail to organize a raid on the sheep. Between two and three thousand animals disappeared thus in 1934.

A few natives are permanent employees of the company. They watch the gates which give access to the company's property, form night patrols, and do routine work on the farms. At shearing time most of the young men and women on the island gather at Vai-tea, the farm in the middle of the island,

464 for a fortnight of intense activity. Shearing is their only means of making money to acquire necessary goods. They are paid according to the number of sheep they shear per day. Those who are skillful may earn as much as [465] two or three hundred pesos during the season; even young girls make as much as 12 pesos a day. Such salaries, when compared with those of the working classes in Chile, are bountiful. Shearing time is the greatest event of the year, and it has taken the place of the old native feasts. The work, with its competitive aspect and the gathering of the young people in an isolated part of the island, breaks the monotony of daily life.

465 The standard salary for a day's work, established by the Chilean government, is 4 pesos plus half a sheep and other minor rations. The company has taken great care to give the natives a chance to benefit from the exploitation of the island. Export of corn has recently become a possible source of profit, and the company has tried to encourage the natives to cultivate maize. At the present time only two or three natives have taken advantage of this new source of income.

435 The most coveted foreign goods are clothes, soap, and perfume. The first things the natives ask for aboard a foreign ship are shirts and trousers. 439 Money is accepted, but a shirt is preferred to a sum of money four or five 463 times as great as the value of the article. In order to obtain clothes, they resort to the making of curios, the most flourishing industry of the island. The men carve wooden images, canes, and swords; and the women plait hats, crowns, or feather strings. Most individuals are able to produce these articles, but some are unusually gifted and have specialized in their crafts. Those who want a stock of curios to trade during the visit of a ship may acquire from the experts articles to trade on their own account. As the ships that visit the island are generally warships or freighters, it is easier for the men to get clothes than for the women, and any textile which may be used by women has a high value on the island.

435 Soap comes after clothes in the scale of value. Natives are always willing 439 to work or to exchange curios for soap. Combs, mirrors, cheap rings, or earrings are begged for, but not so eagerly coveted.

The islanders rely mostly on the products of their land for food, but 276 imported products are always welcome changes in the monotony of their 439 menus. Flour, rice, and sugar are either bought at the company store or received as part payment for their work. The tobacco which grows on the island is considered too strong by the natives, who prefer Chilean cigarettes. Smoking is a widespread habit, especially among women.

Numerous conflicts have arisen between the natives and the company. 152 Stealing has been one of the chief sources of trouble, but many other difficul- 648 ties have come from the turbulent spirits of the natives and from their easily excited imaginations. Easter Islanders are apt to believe the most unfounded
